

Moffat Collection System Project

**Gross Reservoir (FERC Project No. 2035)
Comments of the Pre-Assessment Document (PAD)*
July 29 & 30, 2008**

Your input is important to the Federal Energy Regulatory Commission (FERC) Amendment process. You may use the space provided below to write down your comments. All comments will be sent to the FERC by Denver Water. You can hand in your comments, or you may submit them by mail, fax, or e-mail. Deadline for comments is Monday, September 29, 2008.

Gross Reservoir was constructed and originally licensed by the FERC in 1951. The FERC license was renewed in March 2001, at which time hydroelectric power was added. Denver Water is now requesting an amendment to the existing license in the following areas.

- Enlarging the existing dam structure
- Relocation of existing recreation facilities
- Expansion of the FERC project boundary
- Increased power generation

Your input on these four areas would be helpful. Please print legibly so your comments can be properly recorded. If you need assistance in completing this comment card please contact a Denver Water staff person.
